

Fictional case: Zentaryl and acute liver injury

Fictional journal — synthetic case for software testing. DOI: 10.0000/fake.case

Abstract

A 58-year-old fictional woman developed jaundice six weeks after Zentaryl 20 mg daily. Bilirubin peaked at 4.1 mg/dL. The drug was stopped and enzymes improved. Identifiable as a single patient case.

Case report

A 58-year-old fictional woman developed jaundice six weeks after Zentaryl 20 mg daily. Bilirubin peaked at 4.1 mg/dL. The drug was stopped and

enzymes improved. Identifiable as a single patient case. Discussion of DILI mechanisms in general should be ignored. This paragraph is filler about hepatic metabolism.
